### Suggested Fonts

Bauhaus Light  
Bauhaus Medium  
Bell Gothic Light

### Manufacturer

Bitstream  
Bitstream  
Adobe

## Customizing the Layout and Style Sheets

To update fonts, simply modify the pre-defined style sheets then search and replace fonts in your application. Style sheets have been used to format the Layout's text content. Style sheets control font, size, color, paragraph indents and spacing throughout the Layout. Refer to your application documentation for information about using style sheets. For more information about customizing your Design Layout, visit Support at [www.stocklayouts.com](http://www.stocklayouts.com).

## Prepress and Printing

Design Layouts have been produced to print in four-color process CMYK or multiple PMS colors, and are press-ready. Photographic images included with the Layout are high-resolution 300 dpi. Bitmap line art graphics are 800 dpi. For best results, files should be output to film or direct-to-plate using a 150 lpi screen setting. Check with your prepress provider or commercial printer regarding special printing techniques. Layouts and images are fully customizable and can be modified to accommodate one or two color printing.
